

Murphy Pain Center is devoted to bringing you the treatments you need to feel your best, and be your best. We offer a multitude of pain management programs suited for your condition and your lifestyle. Our featured programs include: Comprehensive Pain Management FAST TRACK Pain Management

Specialty Consultation Services

Comprehensive Pain Management

Designed for the person who may need the full range of treatments available. This may consist of safe and appropriate use of pain medications including, when necessary, narcotics and other controlled substances. The individual can rest assured that compliance with regulatory agencies is of the utmost importance. Patients in this program will access therapies such as X-ray guided epidurals and nerve blocks, implantable devices such as spinal cord stimulation and pumps, and advanced therapies such as radiofrequency lesioning and intradiscal electrothermal therapy. When treating pain, it is often necessary for a patient to be seen by several different specialists. Our staff will insure access and referrals to network specialists, helping to coordinate care.

Acupuncture

For Your Convenience

Most procedures can be performed in our new outpatient facility, with sedation available upon request.

FAST TRACK Pain Management

Time is valuable. When you need to be treated as soon as possible and do not need controlled substances, you may qualify for our FAST TRACK program.

FAST TRACK includes convenient hours set aside exclusively for FAST TRACK patients. No routine previsit screening, labs, and orientation are necessary. Patients will have access to all of the advanced therapies offered to our Comprehensive patients, with most therapies being performed conveniently, quickly, and cost-effectively in our new outpatient facility.

Specialty Consulting Services

Our training, credentials, experience, and reputation enable our physicians to provide expert consultation regarding pain management cases and regulatory issues.

Optimal Care Consultation

This service is designed for the patient who is not necessarily planning on entering into a chronic pain management program, but would like to know what treatments are available and what diagnostic studies would be appropriate to maximize one's ability to function.

Second Opinion Consultation

At times, patients and physicians alike need to gain a measure of comfort that can come from an expert second opinion regarding interventional pain management options. This service examines medication management, and the prescription of controlled substances with special consideration given to compliance with directives from governmental regulatory bodies.
